Art Unit: 2854

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to the composition of the barrier layer, classified in class 101, subclass 450.1.
- II. Claims 1, 6 and 7, drawn to the angle at which the first and third surface contact, classified in class 101, subclass 450.1.
- III. Claims 1, 6 and 8, drawn to the composition of the further barrier layer, classified in class 101, subclass 450.1.
- IV. Claims 9 and 10, drawn to a method of printing ink on a substrate involving bringing an elastomeric stamp into contact with ink, absorbing the ink and cleaning a barrier layer of the stamp, drying the stamp and forming a pattern by placing the ink on a substrate, classified in class 101, subclass 450.1.
- V. Claims 11-13, drawn to a method of printing with an elastomeric stamp comprising depositing a metal on the surface of the stamp and oxidizing the barrier layer, classified in class 101, subclass 450.1.
- VI. Claims 11 and 14-18, drawn to a method of printing with an elastomeric stamp involving adhering polymer material to the stamp surface, classified in class 101, subclass 450.1.

Art Unit: 2854

VII. Claims 11 and 19-21, drawn to the composition of the first surface of an elastomeric stamp used in a method for printing ink on a substrate, classified in class 101, subclass 450.1.

The inventions are distinct, each from the other because of the following reasons:

- 2. The invention is first broken down into Group A, claims 1-8, including Groups I-III and Group B, claims 9-21, including groups IV-VII. Inventions of Groups A and B are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus claimed can be used in a process that does not involve cleaning the barrier layer.
- 3. Within groups A are Groups I-III, directed to related products and processes respectively. The related inventions are distinct if: (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have a materially different design and are not obvious variants. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Application/Control Number: 10/575,797

Art Unit: 2854

4. Within Group B are Groups IV-VII, also directed to related products and processes respectively. The related inventions are distinct if: (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have a materially different design and are not obvious variants. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Page 4

5. The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not

Art Unit: 2854

sommensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

6. A telephone call was made to Doug McKnight on June 19, 2008 to request an oral election to the above restriction requirement, but did not result in an election being made.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DAVID BANH whose telephone number is (571)270-3851. The examiner can normally be reached on M-Th 9:30AM-8PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Judy Nguyen can be reached on (571)272-2258. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
